

# Product Accompanying Analytics

## Accredited testing laboratory as a long-term analytics partner

The legal requirements on products are becoming more and more demanding – it is therefore essential to identify the components of a product that contribute to a desired or also potentially undesired effect.

To this end, BioTeSys offers a variety of analytical services. Test methods based on HPLC and LCMS reliably detect active ingredient profiles and are ideally suited for quality control of intermediate and end products, for supplier qualification or for the verification of raw material specifications. In addition, cell culture-based test methods provide reliable information on impact statements, bioavailability and cytotoxic or genotoxic characteristics of product components. In the case of complaints, BioTeSys acts as an independent laboratory for external quality control.

## Examination spectrum

The BioTeSys GmbH has been active as an independent analysis partner for more than 15 years and has been accredited since 2003 according to DIN ISO/IEC 17025. As such, the company has many years of expertise in the areas of

- food & feed
- food supplements & nutraceuticals
- cosmetics & oral care
- medical devices

Of course, BioTeSys also develops tailor-made analytical methods on customer request, validating them according to the European ICH guideline and following GMP.

We then transfer the corresponding expertise into your company laboratory. The flexible accreditation also offers the possibility to react quickly to new standards and novel customer requests.

## Advantages

The involvement of BioTeSys as a competent, reliable, flexible and independent service provider opens up opportunities for our customers:

- Analytical methods are quickly and efficiently developed, validated and then implemented for the customer.
- Bottlenecks or seasonal peaks in demand for analytical methods can be covered by outsourcing.
- Testing and control functions can be transferred to the independent BioTeSys testing laboratory to ensure adherence to applicable quality guidelines.

The independent inspection by the flexibly accredited BioTeSys contract laboratory thus guarantees the quality of the declared products and provides the necessary security for marketing and application to both the manufacturer and the consumer.
